

Efficient logistics with 18% LTL utilization boost & 9% transport cost reduction

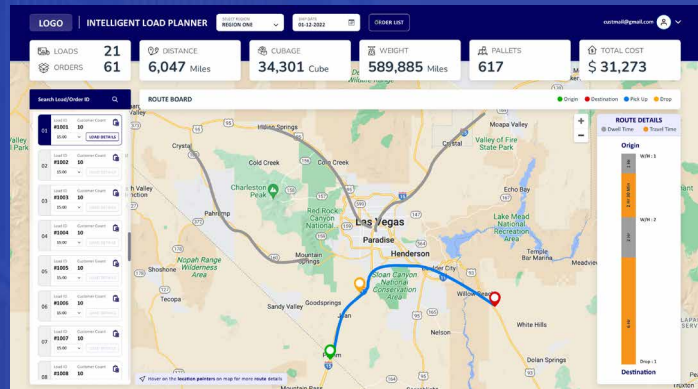

Challenge

An American refrigeration warehouse company sought to optimize its LTL utilization and reduce transportation costs.

Solution

Gramener's AI-based transportation consolidation and planning system with Geospatial features identifies optimal loads across facilities and consignees.

A Solution Snapshot

Impact

By integrating the model into the client's TMS, our solution made recommendations to enhance truck utilization, delivering a 9% reduction in transportation costs & 18% increase in LTL utilization over 3 months.
