

# PORTFOLIO CARBON NAVIGATOR

Climate Data Platform to Accelerate the Net Zero Journey of Financial Institutions

## Delay in climate action leads to higher cost of emission reduction & increased exposure to transition risk

### Factors driving delay

- 01 Portfolio companies do not monitor GHG emissions and do not adopt targets
- 02 Limited visibility of financed emissions
- 03 Limited visibility of climate action by portfolio companies

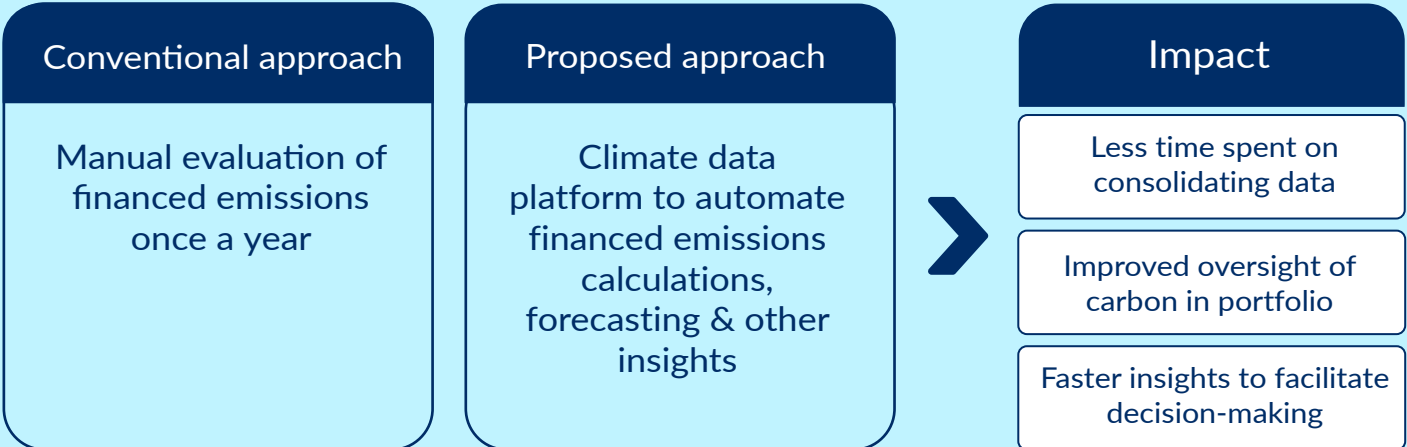

### Cost of delaying climate action

Median value of increase in emissions intensity for companies w/o GHG target <b>9% ↑</b>	Estimated y-o-y increase in costs of emission reduction due to delayed transition <b>14% ↑</b>
---	---

### Risks for financial institutions

Number of climate change litigation cases against corporate defendants in 2021 <b>38 ↑</b>	Increase in probability of credit default for companies with high climate risk exposure <b>2x to 3x ↑</b>
---	--

## Automating portfolio carbon insights can optimize efforts and reduce delays
